SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

The principal accounting policies applied in the preparation of these financial statements are as follows:

3.1 Property, plant and equipment

These are stated at cost less accumulated depreciation except for freehold land and leasehold land which are stated at revalued amount and cost respectively. Subsequent costs are included in the asset's carrying amount or recognized as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the Company and the cost of the item can be measured reliably. All other repairs and maintenance are charged to profit or loss during the financial year in which they are incurred.

The depreciation is charged to income applying reducing balance method. The depreciation on additions during the year is charged at half of the applicable rate while no depreciation is charged on deletion during the period. Gain or loss on disposal of property, plant and equipment, if any, are recognized in profit or loss, as and when incurred. Maintenance and normal repairs are charged to income as and when incurred. Major renewals and improvement are capitalized and the assets so replaced, if any, are retired.

Assets' residual values and their useful lives are reviewed and adjusted at each reporting date, if significant and appropriate. Assets are derecognized when disposed or when no future economic benefits are expected from its use or disposal.

3.2 Impairment of non-financial assets

The carrying amounts of non-financial assets are reviewed at each reporting date to determine whether there is any indication of impairment. If any such indication exists then the asset's recoverable amount is estimated. An impairment loss is recognized, as an expense in the profit or loss, for the amount by which the asset's carrying amount exceeds its recoverable amount. The recoverable amount is the higher of an asset's fair value less cost to sale and value in use. Value in use is determined through discounting of the estimated future cash flows using a discount rate that reflects current market assessments of the time value of money and the risks specific to the assets.

An impairment loss is reversed if there has been a change in the estimates used to determine the recoverable amount. An impairment loss is reversed only to the extent that the asset's carrying amount does not exceed the carrying amount that would have been determined, net of depreciation or amortization, if no impairment loss had been recognized.

3.3 Financial assets and liabilities

3.3.1 Initial recognition

All financial assets and liabilities are initially measured at cost which is the fair value of the consideration given or received. These are subsequently measured at fair value or amortized cost as the case may be.

3.3.2 Classification of financial assets

The Company classifies its financial instruments in the following categories:

- at amortized cost;
- at fair value through other comprehensive income ("FVTOCI"); or
- at fair value through profit or loss ("FVTPL").

The Company determines the classification of financial assets at initial recognition. The classification of instruments (other than equity instruments) is driven by the Company's business model for managing the financial assets and their contractual cash flow characteristics.

Financial assets at amortized cost

Financial assets that meet the following conditions are subsequently measured at amortized cost:

a) the financial asset is held within a business model whose objective is to hold financial assets in order to collect contractual cash flows; and

b) the contractual terms of the financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

Financial assets at fair value through OCI

Financial assets that meet the following conditions are subsequently measured at FVTOCI:

a) the financial asset is held within a business model whose objective is achieved by both collecting contractual cash flows and selling financial assets; and

b) the contractual terms of the financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

However, the Company may make an irrevocable election at initial recognition for particular investments in equity instruments that would otherwise be measured at fair value through profit or loss to present subsequent changes in fair value in other comprehensive income provided that the investment is neither held for trading nor is a contingent consideration in a business combination.

Financial assets at fair value through P&L

A financial asset is measured at fair value through P&L unless it is measured at amortized cost or at fair value through OCI.

3.3.3 Financial liabilities

The Company classifies its financial liabilities in the following categories:

- at fair value through profit or loss ("FVTPL"), or
- at amortized cost.

Financial liabilities are measured at amortized cost, unless they are required to be measured at FVTPL (such as instruments held for trading or derivatives) or the Company has opted to measure them at FVTPL.

3.3.4 Subsequent measurement

Financial assets at FVTOCI

Elected investments in equity instruments at FVTOCI are initially recognized at fair value plus transaction costs. Subsequently, they are measured at fair value, with gains or losses arising from changes in fair value recognized in OCI.

Financial assets and liabilities at amortized cost

Financial assets and liabilities at amortized cost are initially recognized at fair value plus or minus transaction costs, and subsequently carried at amortized cost, and in the case of financial assets, less any impairment.

Financial assets and liabilities at FVTPL

Financial assets and liabilities carried at FVTPL are initially recognized at fair value and transaction costs are expensed in the statement of profit or loss and other comprehensive income. Realized and unrealized gains and losses arising from changes in the fair value of the financial assets and liabilities held at FVTPL are included in the profit or loss in the period in which they arise. Where management has opted to recognize a financial liability at FVTPL, any changes associated with the Company's own credit risk will be recognized in other comprehensive income. Currently, there are no financial liabilities designated at FVTPL.

3.3.5 Impairment of financial assets at amortized cost

The Company recognizes a loss allowance for expected credit losses (ECLs) on financial assets that are measured at amortized cost. Loss allowances are measured on the basis of life time (ECLs) that result from all possible default events over the expected life of a financial instrument.

Lifetime ECL is only recognized if the credit risk at the reporting date has increased significantly relative to the credit risk at initial recognition. Credit risk of a financial asset is assumed to be increased significantly if it is more than past due for a reasonable period of time as decided by the senior management of the Company. Further, the Company considers information based on the Company's historical experience and the impact of forward looking information (such Company's internal factors and economic environment of the country of customers) on ECLs that is available without undue cost or effort. However, in certain cases, the Company may also consider a financial assets to be in default when internal or external information indicates that the Company is unlikely to receive the outstanding contractual amounts in full before taking into account any credit enhancements held by the Company. Credit losses are measured as the present value of all cash shortfalls (i.e. the difference between the cash flows due to the entity and the cash flows that the Company expects to receive). A financial asset is written off when there is no reasonable expectation of recovering the contractual cash flows.

The Company recognizes an impairment gain or loss in the statement of profit or loss for all financial instruments with a corresponding adjustment to their carrying amount through a loss allowance account.

3.3.6 Derecognition

Financial assets

The Company derecognizes financial assets only when the contractual rights to cash flows from the financial assets expire or when it transfers the financial assets and substantially all the associated risks and rewards of ownership to another entity.

On derecognition of a financial asset measured at amortized cost, the difference between the asset’s carrying value and the sum of the consideration received and receivable is recognized in profit or loss.

In addition, on derecognition of an investment in a debt instrument classified as at FVTOCI, the cumulative gain or loss previously accumulated in the investments revaluation reserve is reclassified to profit or loss.

In contrast, on derecognition of an investment in equity instrument which the Company has elected on initial recognition to measure at FVTOCI, the cumulative gain or loss previously accumulated in the investments revaluation reserve is not reclassified to profit or loss, but is transferred to revenue reserve.

Financial liabilities

The Company derecognizes financial liabilities only when its obligations under the financial liabilities are discharged, cancelled or expired. The difference between the carrying amount of the financial liability derecognized and the consideration paid and payable, including any non-cash assets transferred or liabilities assumed, is recognized in the statement of profit or loss and other comprehensive income.

3.3.7 Offsetting of financial assets and financial liabilities

Financial assets and financial liabilities are offset and the net amount is reported in the financial statements only when there is a legally enforceable right to set off the recognized amount and the

Company intends either to settle on a net basis or to realize the assets and to settle the liabilities simultaneously.

3.4 *Development property*

Property acquired, constructed or in the course of construction and is held for sale in the ordinary course of business, rather than held to earn lease income or capital appreciation, is classified as development property and is measured at lower of cost and net realisable value. The Company will sell residential and commercial plots and bungalows and will not provide any construction services as a contractor engaged by the buyer. In addition, the buyer of constructed units does not have an ability to specify the major structural elements of the design or major structural changes before construction or when the construction is in progress. All project costs incurred are capitalised as a cost of development properties and mainly includes:

- Cost of leasehold land.
- Amounts paid to contractors for construction or development of amenities.
- Development or other charges including those paid to relevant authorities.

Net realizable value is the estimated selling price in the ordinary course of the business, based on market prices at reporting date less estimated costs of completion and the estimated costs necessarily to be incurred to make the sale.

The cost of sales recognised in profit or loss on disposal is determined with reference to the costs incurred on the plots / commercial sites sold and an allocation of any non-specific costs based on the total area of land sold for plots / commercial sites, in relation to total area of land.

3.5 *Deposits and prepayment*

Prepayment are stated at cost less provision for doubtful balances, if any. Deposits are initially stated at fair value and subsequently measured at amortized cost after deducting allowance for uncollectable amount, if any. Deposits and prepayment considered irrecoverable are written off.

3.6 *Trade debts*

Trade debts are recognized initially at fair value and subsequently measured at amortized cost after deducting allowance for uncollectable amounts, if any. The Company applies the IFRS 9 simplified approach to measure the expected credit losses (ECL) which uses a lifetime expected loss allowance for trade debts. Trade debts considered irrecoverable are written off.

Since all the trade debts except for lease receivables were credit impaired at reporting date, therefore, the Company had used practical expedient in accordance with IFRS 9 for calculation of the ECL on trade debts using a provision matrix.

3.7 Cash and cash equivalents

It comprises of cash in hand and cash at bank which are carried at amortized cost. For the purpose of cash flow statements, cash and cash equivalent include cash in hand, current and deposit account held with the banks.

3.8 Revaluation surplus on property

A revaluation surplus is recorded in other comprehensive income and credited to the revaluation surplus on property in equity. However, to the extent that it reverses a revaluation deficit of the same asset previously recognized in the profit or loss, the increase is recognized in the profit or loss. A revaluation deficit is recognized in the profit or loss, except to the extent that it offsets an existing surplus on the same asset recognized in the revaluation surplus on property. Upon disposal, any revaluation surplus relating to the particular operating fixed asset being sold is transferred to equity.

3.9 Bank borrowings

All bank borrowings are initially recognised at fair value less directly attributable transaction costs, if any. Subsequently, these are measured at amortised cost using effective interest rate method.

The Company has restructured all its bank borrowings and related markup liabilities as disclosed in note 15 to these financial statements.

3.10 Trade and other payables

Liabilities for creditors and other amounts payable are carried at cost, which is the fair value of the consideration to be paid in the future for the goods and / or services received, whether or not billed to the Company.

3.11 Taxation

Current

Provision for current taxation is made in accordance with provision's of Income tax ordinance 2001. The charge for current taxation is based on taxable income at the current rate of taxation after taking into account applicable tax credit, rebates and exemptions available, if any, or applicable minimum tax on turnover or Alternate Corporate Tax, whichever is higher.

Deferred

Deferred income tax is provided using the balance sheet liability method for all temporary differences at the reporting date between tax base of assets and liabilities and their carrying amounts for financial reporting purposes. The amount of deferred tax provided is based on the expected manner of realization or the settlement of the carrying amounts of assets and liabilities, using the tax rates enacted or substantively enacted at reporting date.

Deferred income tax asset is recognized for all deductible temporary differences and carry forward unused tax losses, if any, to the extent that it is probable that taxable profit for the foreseeable future will be available against which such temporary differences and tax losses can be utilized.

3.12 Provisions

Provisions are recognized when the Company has a present (legal or constructive) obligation as a result of past events and it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate of the amount can be made. Provisions are reviewed at each reporting date and adjusted to reflect the current best estimate.

3.13 Revenue recognition

Revenue is recognised at the amounts that reflect the consideration that the Company expects to be entitled to in exchange for transferring goods to a customer. Revenue is measured at the fair value of the consideration received or receivable, and is recognised on the following basis;

Revenue from sale of plots and commercial sites are recognized as the performance obligations are satisfied. The Company satisfies its performance obligations over time because the customer controls the asset as the asset is developed. The control of plots or sites is transferred to the customers generally upon issuance of letter of possession to the customers upon the Company's satisfaction that the economic benefits of the transaction will flow to the Company in its entirety. Revenue is recognized based on amount of transaction price specified in the contract by allocating to performance obligation satisfied during the year. The Company uses input methods to measure the progress towards complete satisfaction of performance obligations instead of output methods because the outputs used to measure progress are not directly observable and information required is not available without undue cost. Input methods are based on development costs incurred till reporting date and costs to be incurred. The transaction price of the Company's contract with customers does not include any variable consideration, any significant financing component, any non cash consideration or any consideration payable to its customers.

Lease income is recognized on accrual basis in accordance with terms of agreement. The credit term ordinarily ranges from 7 to 10 days.

Dividend from investment fair value through profit or loss are recorded when right to receive the same is established.

Gain on sale of fixed assets is recognized on occurrence of transactions.

Other income is recognized on the occurrence of related transactions.

3.14 Foreign currency translation

Transactions in foreign currency are translated into rupees at the rate of exchange prevailing at the date of transaction. Exchange gains and losses are included in income currently. All monetary assets and liabilities in foreign currencies are translated at the rates of exchange prevailing at reporting date.
